

Washington High School is proud to offer 4 Engineering classes that award college credit through the Kirkwood College Credit Program. One of these classes is Principles of Engineering (POE); taught by Mr. Jeffrey Richard. Students recently constructed projects which were either a Fuel Cell Car (running on hydrogen for energy) or Marble Sorter (which was a working marble sorter run by a computer). Pictured here are examples of the projects. Top picture: Caitlin M, Vanessa W, Abbey T and Kyle B with the Fuel Cell Car they constructed. Bottom picture: Caitlin M with project she completed with Derek M (not present for picture).
