

FTC offers students like you the opportunity to build robots, learn computer programming and Computer Assisted Design (CAD) and compete against other teams at the local, regional and national level! You will gain practical, hands-on skills that test the theories and concepts you learn in the classroom. When you join an FTC team, you join a global community of students who are interested in using technology to build a better world tomorrow. There are over 20,000 students from around the globe who design and build robots to compete against one another in competition

In addition to the fun and excitement, FTC students also gain access to over \$10 million in college scholarships. Please contact Mr. Mayer at 319-653-5414 by Friday, September 6, 2013. Practices will start soon and will be after school at WHS!
