

In the week of June 1-5, Campers at Camp Invention had fun creating inventions & doing rapid prototyping to make life easier for themselves and others. They enjoyed taking apart electronics & creating video game models using the parts. They also invented shields to stay dry in Hydro-Challenge, designing inventions that are used in water, space, and on land. They had a great time playing cooperative games with their teams! Thank you to the parents, participants, Silver Cord volunteers, parent volunteers, Camp Invention teachers and Lincoln staff/custodians for making this a successful year!
